

Comtax[®] Basic 2010

Since 1985, users have discovered how Comtax[®] can help create effective cost control. Clients include multinational companies, lawyers, tax consultants and leading banks worldwide.

Comtax[®] Basic 2010 allows you to calculate your cross-border transactions with all tax costs taken into account to and from 129 countries/entities worldwide, supported by an extensive reference database. To guarantee that you always work with the latest information monthly updates are available via the Internet. In connection with the monthly update, a newsletter is published and distributed to you.

With Comtax[®] Basic 2010 you may:

- Set up calculations with up to two intermediary countries using dividend, interest or royalties. The intermediary position can hold a range of countries. All countries inserted in a position are evaluated in the calculation and if possible the 30 best results are presented and described in detail.

- Calculate with dividend, interest (two types) and royalty (three types) transactions.
- Calculate with different tax positions, e.g. current loss
- Change a rate in the calculation results according to your specific situation.
- Access a comprehensive database covering more than 400,000 tax rates which are updated monthly.
- Calculate an effective corporate tax rate.
- Easily reachable structured commentaries per country. The tax library gives you updated information for further research.
- Complete the analysis with the capital gains tax calculation on the realisation of shares.
- Swiftly print and export (possible formats: Adobe[®] pdf, Microsoft[®] Excel or Microsoft[®] Word) information and calculation results to be used in reports.
